DETAILED ACTION

Page 2

Election/Restrictions

1. Applicant's election with traverse of group I, claims 1-9 and 11-15 in the reply filed on October 14, 2004 is acknowledged. Claims 10 and 16 are withdrawn from consideration.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-9 and 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Atwell et al (US 5358910) in view of Becker et al (US 5616650).
- 4. As discussed in the applicants specification (page 3, lines 4-9), Atwell et al taught methods of making porous ceramics from preceramic polymers and ceramic powder (see col. 1, line 66 to col. 4, line 4; col. 4, lines 51-57; col. 5, line 23 to col. 6, line 21). Atwell et al did not

Art Unit: 1731

include hollow microspheres. Becker et al taught that similar preceramic polymer compositions were commonly combined with solid and hollow filler materials (see col. 12, line 51 to col. 13, line 41). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use hollow microspheres or 'bubbles' of various sorts together with the ceramic powder filler in Atwell et al because Becker et al taught that it was well known in the art. The expandability of the spheres would have been possible because Becker et al taught that hollow sphere or bubbles used as fillers were made of different materials including glass, metals and polymers.

Conclusion

- 5. The prior art made of record and not relied upon is cited to further show the state of the art.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean E. Vincent whose telephone number is (571) 272-1194. The examiner can normally be reached on M F (8:30 6:00).
- 7. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven P. Griffin can be reached on (571) 272-1189. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
- 8. Information regarding the status of an application may be obtained from the Patent
 Application Information Retrieval (PAIR) system. Status information for published applications

Application/Control Number: 10/670,040

Art Unit: 1731

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
